

The HVACR industry is crucial for keeping people, products and businesses safe and comfortable.

It covers Heating, Ventilation, Air Conditioning, and Refrigeration.

These systems control the air quality, temperature, and humidity inside buildings and systems.

Refrigeration and air conditioning typically fall into the **HVACR industry**, which stands for **Heating, Ventilation, Air Conditioning, and Refrigeration**.

This industry encompasses the design, installation, maintenance, and repair of systems that control temperature, humidity, and air quality in residential, commercial, and industrial settings.

Related Sectors:

- **Construction and Building Services:**
HVACR systems are essential in construction projects.
- **Manufacturing:**
Equipment and components for HVACR systems are manufactured here.
- **Energy and Utilities:**
These systems impact energy consumption and efficiency.
- **Automotive:**
Air conditioning systems in vehicles are part of this field.
- **Cold Chain Logistics:**
Refrigeration is vital for preserving perishable goods in transportation and storage.
